DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, 10-12, 16 are drawn to an isolated polynucleotide comprising a nucleic acid sequence encoding geraniol synthetase (GES) that converts geranyl diphosphate to geraniol and method of making the same.

Group II, claim(s) 6-9 are drawn to a polypeptides having geraniol synthase activity , which convert geranyl diphosphate to geraniol.

Group III, claims 13-15 are drawn to a method for producing geraniol, comprising culturing host cells transformed with a vector comprising a polynucleotide that expresses geraniol synthase in a suitable culture conditions.

Group IV, claims 17-18 are drawn to the use of geraniol or metabolites thereof in a product selected from the group consisting of agricultural, cosmetic and food products.

The invention listed in Groups 1-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reason. The technical feature linking the invention of Groups I-IV is a polynucleotide encoding a geraniol synthase that is capable of converting geranyl diphosphate to geraniol. However Genbank Accession no. AJ457070 submitted on April 15, 2002 by Yang et al teach mRNA for a putative terpene synthase gene (tf1 gene) from *Cinnamomum tenuipilum* that encodes a geraniol synthase. Thus the technical feature that links the inventions in group I-IV is not a special technical feature as required by PCT Rule 13.2.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not

commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
